Introduction

This document describes a DC Application Profile for describing an eprint. The application profile is based on the Eprints • Model, which is in turn based on FRBR. The model comprises 5 entities - ScholarlyWork, Expression, Manifestation, Copy and Agent. This application profile provides a way of describing these entities as part of a *description set* (a set of related DC *descriptions*).

The notion of a description set

is part of the DCMI Abstract Model. Readers that are not familiar with the DCMI Abstract Model should read • A note about the DCMI Abstract Model before proceeding.

All the examples in this document are formatted according to the DC-Text notation. Readers who are not familiar with DC-Text should read • A note about DC-Text before proceeding.

In the context of this work an eprint is defined to be a *scientific or scholarly research text* (as defined by the Budapest Open Access Initiative), for example a peer-reviewed journal article, a preprint, a working paper, a thesis, a book chapter, a report, etc.

Eprints Application Profile

Each description set

that complies with the Eprints Application Profile is made up of a set of related *descriptions* about the entities listed above. Therefore, a typical *description set* (using the DC-Text notation) has the following structure:

```
Description Set (

Description (

# description of the eprint as a ScholarlyWork

...
)

Description (

# description of an Expression of the eprint

...
)

Description (

# description of a Manifestation of an Expression of the

...
)

Description (

# description of a Copy of a Manifestation of an Expressi

...
)

Description (
```

```
# description of an author, funder, supervisor of the epr
...
)
Description (
    # description of an editor of an Expression of the eprint
...
)
Description (
    # description of the publisher of a Manifestation of an E
...
)
...
)
```

Each *description set* describes only one eprint (i.e. one ScholarlyWork entity). However, multiple *descriptions*

may be used to describe multiple Expression, Manifestation and Agent entities as necessary.

The metadata terms that may be used to describe each entity are described below. Note that all *properties* may be repeated if necessary. Unless otherwise noted, multiple *value strings* should be provided using separate *statements*. Where appropriate, each *value string* may have an associated *language tag*.

A minimal description set that conforms to this application profile must include either:

- a single ScholarlyWork *description* with at least one dc:title *statement* and one dc:type *statement* indicating that this is an entity of type http://purl.org/eprint/entityType/ScholarlyWork, or
- a single ScholarlyWork *description* with one one dc:type *statement* indicating that this is an entity of type http://purl.org/eprint/entityType/ScholarlyWork and one eprints:isExpressedAs *statement* linking to a single Expression *description* with at least one dc:title *statement* and one dc:type *statement* indicating that this is an entity of type http://purl.org/eprint/entityType/Expression.

All other aspects of the application profile are optional.

Description of the eprint as a ScholarlyWork

Entity type

Property	• http://purl.org/dc/elements/1.1/type
Min occurrence	1
Max occurrence	1
Literal?	No
Definition	The type nature or genre of the content of the resource.

Eprint-specific recommendation	Each of the entity <i>descriptions</i> in the <i>description sets</i> conforming with this application profile will need to be explicitly typed. This is done using a dc:type <i>statement</i> with one of the following <i>value URIs</i> taken from the Eprints EntityType Vocabulary Encoding Scheme corresponding to the entity being described.					
			Value URI Cor	nstraint:		
	Occurrence	mandatory				
	Choose from:	• http://purl.org/eprint/entityType/ScholarlyWork/				
	Vocabulary Encoding Scheme Constraint					
	Occurrence:	mandatory				
Value (Non-Literal)	Choose from:	• http://purl.org/eprint/entityType/				
(Value Str	ing C	onstraint:			
	Max occurrence	e	0			
	Syntax Encoding Syntax Constraint:					
	Occurrence:	nce: disallowed				
	Languas	Language Constraint:				
	Occurrence	disallowed				

```
Statement (
    Property URI ( dc:type )
    Vocabulary Encoding Scheme URI ( eprint:EntityType )
    Value URI ( <a href="http://purl.org/eprint/entityType/ScholarlyWork">http://purl.org/eprint/entityType/ScholarlyWork</a>)
```

Title

Property	http://purl.org/dc/elements/1.1/title
Min occurrence	1
Literal?	Yes
Definition	A name given to the resource.
Eprint-specific recommendation	The title of the eprint. Preserve the original wording, order and spelling of the eprint title. In general, only capitalize proper nouns, though there may be exceptions to this rule particularly regarding Internet-related terms.

Punctuation need not reflect the usage of the original. Subtitles should be separated from the title by 'space-colon-space'.

For example:

```
Statement (
    Property URI ( dc:title )
    Value String ( "Initial sequencing and analysis of the human
)
Statement (
    Property URI ( dc:title )
    Value String ( "New nationalism and the old history : perspec
)
```

Subject

Property	• http://purl.org/dc/elements/1.1/subject				
Literal?	No				
Definition	The topic of the content of the resource.				
Eprint-specific recommendation	The topic of the eprint. In general, choose the most significant and unique words for keywords, avoiding those too general to describe a particular eprint. For free-text keywords use multiple <i>statements</i> , one for each term. There are no requirements regarding the capitalization of keywords though internal (within archive) consistency is recommended. Where terms are taken from a standard classification scheme encode each term in a separate <i>statement</i> . Use a <i>vocabulary encoding scheme URI</i> to indicate the classification scheme in use. Encode the complete subject descriptor according to the relevant scheme. Use the capitalisation and punctuation used in the original scheme. Where subject terms are taken from LCSH, the subfields of the subject heading should be separated by double dash () and spaces should be omitted. If the subject of the eprint is a person or an organization, provide their name as a <i>value string</i> according to A note about the form of personal and organisational names used in value strings.				
Value (Non-Literal)	Value URI Constraint: Occurrence optional				
(Vocabulary Encoding Scheme Constraint				

Occurrence:	optio	optional		
Choose from:	http://purl.org/dc/terms/LCSHhttp://authorities.loc.gov/			
Value Stri	Value String Constraint:			
Max occurrence	rrence 1			
Syntax Encoding Syntax Constraint:				
Occurrence:	disallowed			
Language Constraint:				
Occurrence	optional			

```
Statement (
        Property URI ( dc:subject )
        Value String ( "polar oceanography" )
    Statement (
        Property URI ( dc:subject )
        Value String ( "boundary current" )
    )
Using LCSH subjects:
    Statement (
        Property URI ( dc:subject )
        Vocabulary Encoding Scheme URI ( dcterms:LCSH )
        Value String ( "World War, 1939-1945--Germany" )
    )
    Statement (
        Property URI ( dc:subject )
        Vocabulary Encoding Scheme URI ( dcterms:LCSH )
        Value String ( "Germany--History--1933-1945" )
    )
Name as subject:
    Statement (
        Property URI ( dc:subject )
        Value String ( "Hitler, Adolf, 1889-1945" )
    )
```

Abstract

Property	http://purl.org/dc/terms/abstract		
Literal?	No		
Definition	A summary of the content of the resource.		
Eprint-specific recommendation	A summary of the important points of the eprint.		

Identifier

Property	• http://purl.org/dc/elements/1.1/identifier			
Min occurrence	1			
Literal?	Yes			
Definition	An unambiguous reference to the resource within a given context.			
Eprint-specific recommendation	A URI for the eprint.			
	Syntax Encoding Scheme:			
Value (Literal)	Occurrence mandatory			
	Choose from http://purl.org/dc/terms/URI			

For example:

Note that one of the URIs for the eprint should be encoded as the *resource URI* in the *description*

of the eprint. If a Handle has been assigned to the eprint then this should be used as the *resource URI*, encoded using the http://hdl.handle.net/4263537/4069 form. Additional URIs should be provided using a dc:identifier *statement*. (See the A note about using identifiers below.)

```
Description Set (

Description ( # description of the eprint as a ScholarlyWork

Resource URI ( <a href="http://hdl.handle.net/4263537/4069">http://hdl.handle.net/4263537/4069</a>)

Statement (

Property URI ( dc:identifier )

Value String ( "http://eprints.bath.ac.uk/archive/00(

Syntax Encoding Scheme URI ( dcterms:URI )
```

```
)
,,,,
```

Creator

Property	• http://purl.org/dc/elements/1.1/creator				
Literal?	No	No			
Definition	An entity primaril resource.	An entity primarily responsible for making the content of the resource.			
	An author of the e	print.			
Eprint-specific recommendation	Use this <i>property</i> to provide the author's name and/or the URI of the author and/or to link to a <i>related description</i> (with the <i>description set</i>) about the author. Where a name is provided, see A note about the form of personal and organisational names used in value strings.				
	Description: agent				
	Vocabulary Encoding Scheme Constraint				
	Occurrence:	optional			
	Choose from:	• http://authorities.loc.gov/			
Value (Non-Literal)	Value Stri	ing Constraint:			
value (Non-Enterar)	Max occurrence	e 1			
	Syntax Encodin	g Syntax Constraint:			
	Occurrence:	disallowed			
	Languag	ge Constraint:			
	Occurrence	optional			

For example:

```
Statement (
    Property URI ( dc:creator )
    Value String ( "Heery, Rachel" )
    DescriptionRef ( rachelheery )
)
```

Funder

Property	http://www.loc.gov/loc.terms/relators/FND				
Literal?	No				
Definition	A person or organization that furnished financial support for the production of the work.				
Eprint-specific recommendation	Use this <i>property</i> to provide the funder's name and/or the URI of the funder and/or to link to a <i>related description</i> (within the <i>description set</i>) about the funder. Where a name is provided, see A note about the form of personal and organisational names used in value strings.				
	Description: agent				
	Vocabulary Encoding Scheme Constraint				
	Occurrence:	optional			
	Choose from:	http://authorities.lo	oc.gov/		
Value	Value Stri				
(Non-Literal)	Max occurrence	e 1			
	Syntax Encodin	g Syntax Constraint:			
	Occurrence:	disallowed			
	Language Constraint:				
	Occurrence	optional			

```
Statement (
    Property URI ( marcrel:FND )
    Value String ( "The Mellon Foundation" )
    DescriptionRef ( organization5 )
)
```

Grant Number

Property	http://purl.org/eprint/terms/grantNumber			
Literal?	Yes			
Definition	An alpha-numeric string identifying the funding grant under which the eprint was written.			
Eprint-specific recommendation	Use a <i>value string</i> to provide the grant number.			

```
Statement (
     Property URI ( eprint:grantNumber )
     Value String ( "A456X" )
)
```

Supervisor

Property	• http://www.loc.gov/loc.terms/relators/THS				
Literal?	No				
Definition	A person under whose supervision a degree candidate develops and presents a thesis, mémoire, or text of a dissertation.				
Eprint-specific recommendation	Use this <i>property</i> to provide the supervisor's name and/or the URI of the supervisor and/or to link to a <i>related description</i> (within the <i>description set</i>) about the supervisor. Where a name is provided, see A note about the form of personal and organisational names used in value strings.				
	Description: agent				
	Vocabulary Encoding Scheme Constraint				
	Occurrence:	optional			
	Choose from:	• http://authorities.loc.gov/			
Value	Value Stri	ing Constraint:			
(Non-Literal)	Max occurrence	e 1			
	Syntax Encodin	g Syntax Constraint:			
	Occurrence:	disallowed			
	Languag	ge Constraint:			
	Occurrence	optional			

For example:

```
Statement (
     Property URI ( marcrel:THS )
     Value String ( "Bloggs, Fred" )
     DescriptionRef ( person15 )
)
```

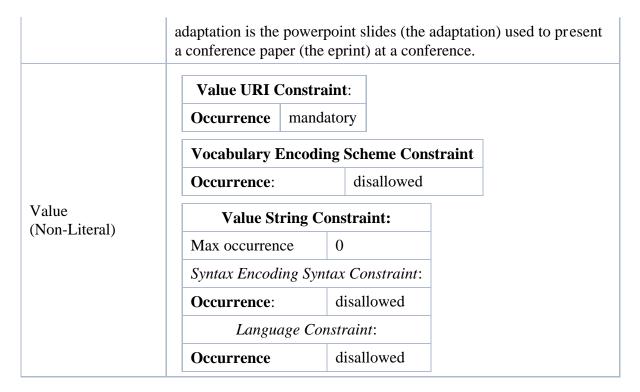

Affiliated Institution

Property	http://purl.org/eprint/terms/affiliatedInstitution					
Literal?	No	No				
Definition	An organisation to	whic	ch a creator of the	e eprint is	affiliated.	
Eprint-specific	Use this <i>property</i> to provide the affiliated organisation's name and/or the URI of the affiliated institution and/or to link to a <i>related description</i> (with the <i>description set</i>) about the affiliated institution.					
recommendation	Where a name of the affiliated organisation is provided, see A note about the form of personal and organisational names used in value strings.					
	Description: agent					
	Vocabulary Encoding Scheme Constraint					
	Occurrence:	optional				
	Choose from:	• http://authorities.loc.gov/				
Value	Value String Constraint:					
(Non-Literal)	Max occurrence	ee 1				
	Syntax Encoding Syntax Constraint:					
	Occurrence:	Occurrence: disallowed				
	Language Constraint:					
	Occurrence	optional				

```
Statement (
    Property URI ( eprint:affiliatedInstitution )
    Value String ( "University of Bristol" )
    DescriptionRef ( bristoluni )
)
```

Has Adaptation

Property	• http://purl.org/eprint/terms/hasAdaptation
Literal?	No
Definition	A scholarly work that results from the described eprint being recast in a new form.
Eprint-specific recommendation	Use this <i>property</i> to provide a value URI of an adaptation of the eprint. In the context of this application profile, an example of an

```
Statement (
    Property URI ( eprint:hasAdaptation )
    Value URI ( <http://www.example.com/mypaper.ppt> )
)
```

Is Expressed As

Property	http://purl.org/eprint/terms/isExpressedAs				
Literal?	No				
Definition	A version of the described eprint.				
Eprint-specific recommendation	An expression of the described eprint. In FRBR terms, an eprint is a Work. Use this <i>property</i> to provide the URI of an expression of the eprint and/or to link to a <i>related description</i> (with the <i>description set</i>) about the expression.				
Value (Non-Literal)	Vocabulary Encoding Scheme Constraint				
	Occurrence: disallowed				
	Value String Constraint:				
	Max occurrence 0				

Syntax Encoding Syr	Syntax Encoding Syntax Constraint:		
Occurrence:	disallowed		
Language Co	Language Constraint:		
Occurrence	disallowed		

```
Statement (
     Property URI ( eprint:isExpressedAs )
     DescriptionRef ( expression1 )
)
```

Description of an Expression of the eprint

Entity type

Property	• http://purl.org/dc/elements/1.1/type				
Min occurrence	1				
Max occurrence	1				
Literal?	No				
Definition	The type nature or	r genre of the content of the resource.			
Eprint-specific recommendation	Each of the entity <i>descriptions</i> in the <i>description sets</i> conforming with this application profile will need to be explicitly typed. This is done using a dc:type <i>statement</i> with one of the following <i>value URIs</i> taken from the Eprints EntityType Vocabulary Encoding Scheme corresponding to the entity being described.				
		Value URI Constraint:			
	Occurrence	mandatory			
	Choose from:	• http://purl.org/eprint/entityType/Expression/			
37.1	Vocabular	Vocabulary Encoding Scheme Constraint			
Value (Non-Literal)	Occurrence:	mandatory			
	Choose from:	• http://purl.org/eprint/entityType/			
	Value Stri	ing Constraint:			
	Max occurrence	e 0			
	Syntax Encodin	g Syntax Constraint:			

Occurrence:	disallowed	
Language	Language Constraint:	
Occurrence	disallowed	

```
Statement (
     Property URI ( dc:type )
     Vocabulary Encoding Scheme URI ( eprint:EntityType )
     Value URI ( <a href="http://purl.org/eprint/entityType/Expression">http://purl.org/eprint/entityType/Expression</a>)
)
```

Title

Property	• http://purl.org/dc/elements/1.1/title
Literal?	Yes
Definition	A name given to the resource.
Eprint-specific recommendation	A title for the expression of the eprint. Only use this property in cases where the expression title is different from the title of the eprint at the scholarly work level. For example, use this property to capture the title of a translation of the eprint.
	Preserve the original wording, order and spelling of the eprint title. In general, only capitalize proper nouns, though there may be exceptions to this rule particularly regarding Internet-related terms. Punctuation need not reflect the usage of the original. Subtitles should be separated from the title by 'space-colon-space'.

For example:

```
Statement (
     Property URI ( dc:title )
     Value String ( "Initial sequencing and analysis of the human
)
Statement (
     Property URI ( dc:title )
     Value String ( "The new nationalism and the old history : per
)
```

Description

Property	• http://purl.org/dc/elements/1.1/description
Literal?	No
Definition	An account of the content of the resource.
Eprint-specific recommendation	A description of the expression of the eprint. Use this property to describe how the expression relates to the eprint as a scholarly work and/or other expressions.

```
Statement (
    Property URI ( dc:description )
    Value String ( "Translated into French for publication in Jou
)
```

Identifier

Property	http://purl.org/dc/elements/1.1/identifier			
Min occurrence	1			
Literal?	Yes			
Definition	An unambiguous reference to the resource within a given context.			
Eprint-specific recommendation	A URI for the described expression of the eprint.			
	Syntax Encoding Scheme:			
Value (Literal)	Occurrence mandatory			
	Choose from http://purl.org/dc/terms/URI			

For example:

Note that one of the URIs for the described expression of the eprint should be encoded as the *resource URI* in the *description*

of the expression. If a DOI or Handle has been assigned to the expression of the eprint then this should be used as the *resource URI*, encoded using the http://dx.doi.org/10.1000/152 or

http://hdl.handle.net/4263537/4069 form. Additional URIs should be provided using a

de:identifier statement. (See the A note about using identifiers below.)

Date Available

Property	http://purl.org/dc/terms/available		
Max occurrence	1		
Literal?	Yes		
Definition	Date (often a range) that the resource will become or did become available.		
Eprint-specific recommendation	The date that the described expression of the eprint was first made public. Use a <i>value string</i> to provide the date, formatted according to the W3C Date Time Format (W3CDTF) specification.		
Value (Literal)	Syntax Encoding Scheme: Occurrence mandatory		
	Choose from http://purl.org/dc/terms/W3CDTF		

For example:

Status

Property	• http://purl.org/e	eprint	/terms/status	
Literal?	No			
Definition	The status of the resource.			
Eprint-specific recommendation	The status of the described expression of the eprint. Recommended best practice is to provide a <i>value URI</i> taken from the Eprints Status Vocabulary Encoding Scheme: http://purl.org/eprint/status/PeerReviewed or http://purl.org/eprint/status/NonPeerReviewed.			
	Value URI Constraint:			
	Occurrence	mandatory		
	Choose from:	 http://purl.org/eprint/status/PeerReviewed http://purl.org/eprint/status/NonPeerReviewed 		
	Vocabulary Encoding Scheme Constraint			
	Occurrence:	mandatory		
Value (Non-Literal)	Choose from:	• http://purl.org/eprint/status/		
(xvon Zuerur)	Value Stri	ing C	onstraint:	
	Max occurrence		0	
	Syntax Encoding Syntax Constraint:		ntax Constraint:	
	Occurrence:		disallowed	
	Language Constraint:			
	Occurrence		disallowed	

```
Statement (
     Property URI ( eprint:status )
     Vocabulary Encoding Scheme URI ( eprint:Status )
     Value URI ( <a href="http://purl.org/eprint/status/PeerReviewed">http://purl.org/eprint/status/PeerReviewed</a>)
)
```

Version Number or String

Property	• http://purl.org/eprint/terms/version
Literal?	Yes
Definition	A version number or version string associated with the resource.

Eprint-specific	A version number or version string associated with the	
recommendation	described expression of the eprint.	

```
Statement (
     Property URI ( eprint:version )
     Value String ( "2.0" )
)
```

Language

Property	• http://purl.org/do	e/elements/	1.1/language			
Literal?	No					
Definition	A language of the in	A language of the intellectual content of the resource.				
Eprint-specific recommendation	Use multiple <i>staten</i> written in multiple	A language in which the described expression of the eprint is written. Use multiple <i>statements</i> if the described expression of the eprint is written in multiple languages. Provide a <i>value string</i> containing a language tag, formatted according to RFC-3066.				
	Value URI Co	nstraint:				
	Occurrence	disallowed				
	Choose from:					
	Vocabulary Encoding Scheme Constraint					
	Occurrence:	Occurrence: di				
Value	Choose from:					
(Non-Literal)	V	alue String	g Constraint:			
	Max occurrence	1	1			
	Syntax	Syntax Encoding Syntax Constraint:				
	Occurrence:	mandatory				
	Option:	http://purl.org/dc/terms/RFC3066				
		Language Constraint:				
	Occurrence	disallow	ed			

For example:

```
Statement (
     Property URI ( dc:language )
```

```
Vocabulary Encoding Scheme URI ( dcterms:RFC3066 )
Value String ( "fr" )
```

Type

Property	• http://purl.org/dc/elements/1.1/type			
Literal?	No			
Definition	The nature or genre of the content of the resource.			
Eprint-specific recommendation	The type of the described expression of the eprint. Recommended best practice is to provide a value URI for a class from the • Eprints Type Vocabulary Encoding Scheme.			
		Value URI Co	nstraint:	
	Occurrence	mandatory		
Value (Non-Literal)	Choose from:	http://purl.org/epri	nt/type/BookItem nt/type/BookReview nt/type/ConferenceItem nt/type/ConferencePaper nt/type/ConferencePoster nt/type/JournalItem nt/type/JournalArticle nt/type/NewsItem nt/type/Patent nt/type/Report type/SubmittedJournalArticle	
	Vocabulary F	Encoding Scheme Co	onstraint	
	Occurrence:	mandatory		
	Choose from:	•http://purl.org/ep	rint/type/	
	Value Stri	Value String Constraint:

    Vocabulary Encoding Scheme URI ( eprint:Type )
    Value URI ( <a href="http://purl.org/eprint/type/JournalArticle">http://purl.org/eprint/type/JournalArticle</a>)
)
```

Copyright Holder

Property	• http://purl.org/eprint/terms/copyrightHolder				
Literal?	No				
Definition	A person or organ	ion owning copyright	in the resource.		
	A person or organ	ion owning copyright	in the eprint.		
Eprint-specific recommendation	Use this <i>property</i> to provide the copyright holder's name and/or the URI of the copyright holder and/or to link to a <i>related description</i> (with the <i>description set</i>) about the copyright holder. Where a name is provided, see A note about the form of personal and organisational names used in value strings.				
	Description: agent				
	Vocabulary Encoding Scheme Constraint				
	Occurrence:	otional			
	Choose from:	http://authorities.loc.g	gov/		
Value	Value String Constraint:				
(Non-Literal)	Max occurrence	1			
	Syntax Encoding Syntax Constraint:				
	Occurrence:	disallowed			
	Language Constraint:				
	Occurrence	optional			

For example:

```
Statement (
    Property URI ( eprint:copyrightHolder )
    Value String ( "University of Leeds" )
```

```
DescriptionRef ( leedsuni )
```

Has Version

)

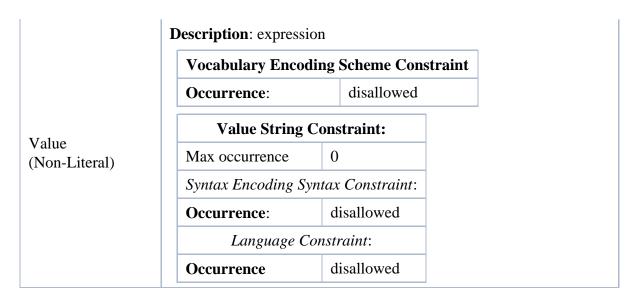

Property	• http://purl.org/dc/terms/hasVersion		
Literal?	No		
Definition	The described resource has a version, edition, or adaptation, namely, the referenced resource.		
Eprint-specific recommendation	Use this <i>property</i> to provide the URI of an alternative expression of the eprint and/or to link to a <i>related description</i> (with the <i>description set</i>) about the alternative expression.		
	Description: expression		
	Vocabulary Encoding Scheme Constraint		
	Occurrence:	disallowed	
	Value String Con	straint:	
Value (Non-Literal)	Max occurrence ()	
	Syntax Encoding Syntax Constraint:		
	Occurrence:	disallowed	
	Language Const	traint:	
	Occurrence	disallowed	

For example:

```
Statement (
     Property URI ( dcterms:hasVersion )
     DescriptionRef ( version-2.1 )
)
```

Has Translation

Property	http://purl.org/eprint/terms/hasTranslation
Literal?	No
Definition	A translation of the described resource.
Eprint-specific recommendation	Use this <i>property</i> to provide the URI of an expression that is a translation of the described expression of the eprint and/or to link to a <i>related description</i> (with the <i>description set</i>) about the translated expression.

```
Statement (
    Property URI ( eprint:hasTranslation )
    DescriptionRef ( version-en )
)
```

Bibliographic Citation

Property	• http://purl.org/dc/terms/bibliographicCitation				
Literal?	Yes				
Definition	A bibliographic re	eference for the resource			
Eprint-specific recommendation	Use this <i>property</i> to provide the text citation that should be used to cite the described expression of the eprint and/or to provide an OpenURL ContextObject for the described expression of the eprint following the guidelines in the • Guidelines for Encoding Bibliographic Citation Information in Dublin Core Metadata DCMI Recommendation. In general, both a human-readable citation and a machine-readable OpenURL ContextObject should be provided.				
	Syntax Encoding Scheme:				
Value (Literal)	Occurrence optional				
	Choose from	Choose from info:ofi/fmt:kev:mtx:			

For example:

```
Statement (
    Property URI ( dcterms:bibliographicCitation )
    Value String ( "Library and Information Science Research 22(3
    Value String ( "&ctx_ver=Z39.88-2004&rft_val_fmt=info%3Aofi%2
```

```
&rft.jtitle=Library+and+Information+Science+Research&rft.
&rft.volume=22&rft.issue=3&rft.spage=311
&rfr_id=info%3Asid%2Fmimas.ac.uk%3Azetoc"
Syntax Encoding Scheme URI ( kev:ctx )
)
)
```

Note that the lines above have been wrapped for readability.

References

Property	• http://purl.org/dc/terms/references			
Literal?	No			
Definition	The described resource references, cites, or otherwise points to the referenced resource.			
Eprint-specific recommendation	Use this <i>property</i> to provide the URI of an expression of a different eprint, a textual citation for the expression and/or an OpenURL ContextObject. In general, where a human-readable citation is provided a machine-readable OpenURL ContextObject should also be provided.			
	Value URI Cons	straint:		
	Occurrence of	ptional		
	Vocabulary Enc	coding Scheme Constraint		
	Occurrence:	disallowed		
Value	Value Str	ing Constraint:		
(Non-Literal)	Max occurrence	2		
	Syntax Encodir	ng Syntax Constraint:		
	Occurrence:	optional		
	Option:	info:ofi/fmt:kev:mtx:		
	Langua	ge Constraint:		
	Occurrence	disallowed		

For example:

```
Statement (
    Property URI ( dcterms:references )
    Value String ( "Heery, R. (2000). \"Information gateways: col
        Online Information Review, 24 (1), 40-45." )
Value String ( "&ctx_ver=Z39.88-2004&rft_val_fmt=info%3Aofi%2
```

Editor

Property	http://www.loc.gov/loc.terms/relators/EDT				
Literal?	No				
Definition	A person or organization who prepares for publication a work not primarily his/her own, such as by elucidating text, adding introductory or other critical matter, or technically directing an editorial staff.				
Eprint-specific recommendation	A person or organisation that prepares the described expression of the eprint for publication. Use this <i>property</i> to provide the editor's name and/or the URI of the editor and/or to link to a <i>related description</i> (with the <i>description set</i>) about the editor.				
			name is provided, see A note about the form of personal nisational names used in value strings.

Name

Property	• http://xmlns.com/foaf/0.1/name
Literal?	Yes

Definition	A name for some thing.	
	A name for the agent (person or organisation).	
Eprint-specific recommendation	In general, use foaf:family_name and foaf:givenname for describing persons and foaf:name for describing organisations.	
	Where a name is provided, see A note about the form of personal and organisational names used in value strings.	

```
Statement (
    Property URI ( foaf:name )
    Value String ( "University of York" )
)
```

Family Name

Property	http://xmlns.com/foaf/0.1/family_name
Literal?	Yes
Definition	The family name of some person.
Eprint-specific recommendation	The family name of a person. In general, use foaf:family_name and foaf:givenname for describing persons and foaf:name for describing organisations.

For example:

```
Statement (
     Property URI ( foaf:family_name )
     Value String ( "Powell" )
)
```

Given Name

Property	• http://xmlns.com/foaf/0.1/givenname
Literal?	Yes
Definition	The given name of some person.
Eprint-specific recommendation	The given name of a person. In general, use foaf:family_name and foaf:givenname for describing persons and foaf:name for describing organisations.

```
Statement (
     Property URI ( foaf:givenname )
     Value String ( "Andy" )
)
```

Workplace Homepage

Property	• http://xmlns.com/foaf/0.1/workplaceHomepage		
Literal?	No		
Definition	A workplace homepage of some person; the homepage of an organization they work for.		
Eprint-specific recommendation	The homepage of the organisation for which the author of the eprint works.		
	Use this <i>property</i> to provide the URI of the organisational homepage as a <i>value URI</i> .		
Value (Non-Literal)		caint: datory ing Scheme Constraint

     Value URI ( "http://www.bham.ac.uk/" )
)
```

Entity typing

Each of the entity *descriptions* in the *description sets* conforming with this application profile will need to be explicitly typed. This is done using a dc:type *statement* with one of the following *value URIs* taken from the • Eprints EntityType Vocabulary Encoding Scheme:

- • http://purl.org/eprint/entityType/ScholarlyWork
- http://purl.org/eprint/entityType/Expression
- • http://purl.org/eprint/entityType/Manifestation
- http://purl.org/eprint/entityType/Copy
- http://purl.org/eprint/entityType/Person
- http://purl.org/eprint/entityType/Organization

For example:

```
Statement (
    Property URI ( dc:type )
    Vocabulary Encoding Scheme URI ( eprint:EntityType )
    Value URI ( <http://purl.org/eprint/entityType/Copy> )
)
```

A note about the form of personal and organisational names used in value strings

Where personal or organisational names are provided as *value strings*, the following guidelines should be followed.

Personal names should be listed surname or family name first, followed by comma-space, then the "usual" or preferred form of forenames and/or initials followed by a full stop. If necessary, this may be followed by the full set of spelled-out forenames in round brackets. Use the same form of name for all eprints, irrespective of the form used on the item itself. ||

For example:

```
Statement (
    Property URI ( marcrel:EDT )
    Value String ( "Bloggs, Fred" )
)
Statement (
    Property URI ( marcrel:EDT )
    Value String ( "Sulston, John E." )
)
Statement (
    Property URI ( marcrel:FND )
    Value String ( "Walker, J. J. (John Joseph)" )
)
```

In the case of organizations where there is clearly a hierarchy present, list the parts of the hierarchy from largest to smallest, separated by full stops. If it is not clear whether there is a hierarchy present, or unclear which is the larger or smaller portion of the body, give the name as it appears in the eprint. ||

For example:

```
Statement (
    Property URI ( marcrel:THS )
    Value String ( "Loughborough University. Department of Comput
)
Statement (
    Property URI ( dc:creator )
    Value String ( "University of Reading. Rural History Centre"
)
Statement (
    Property URI ( dc:publisher )
    Value String ( "John Wiley & Sons, Inc. (US)" )
)
```

The inclusion of personal and corporate name headings from authority lists constructed according to AACR2, e.g. the Library of Congress Name Authority File (LCNA), is also acceptable.

A note about using identifiers

Each of the entities in the model may be assigned a URI, encoded as the *resource URI* in the description of that entity.

It should be noted, however, that assigning and encoding a URI is not mandatory for any of the entities. Although the lack of a URI for any entity means that the entity can not be referenced from within metadata records in other eprint systems, the assignment of URIs to entities should be performed with care (and, where possible, after first checking whether a URI has already been assigned to the entity elsewhere). Multiple URIs for a single entity are likely to cause problems for downstream eprint systems, since it may be difficult for them to determine algorithmically whether any two URIs identify the same entity.

Where the ScholarlyWork and Expression entities in a *description set* have additional URIs, these should be encoded in one or more dc:identifier *statements*. As noted in the relevant sections above, in cases where there are multiple URIs for any entity, one of the URIs should be used as the *resource URI*. Recommended best practice is to use a DOI or Handle as the *resource URI*, where these exist.

The URIs assigned to each of the entities should uniquely identify a single entity. There may be more than one URI per entity, but each URI should only identify one entity.

It is an implementation issue whether the URIs assigned to the ScholarlyWork and Expression entities dereference to a representation of that entity. However, it is anticipated that eprint systems are likely to be configured such that the URI for ScholarlyWork and/or Expression entities dereference to a 'jump-off page' for the eprint, as served by the archive.

In all cases where a dc:identifier *statement* is provided, use a *syntax encoding scheme URI* to indicate that a URI is being provided. ||

For example:

It is not yet clear whether current practice is to assign DOIs at the level of the Work or at the level of the Expression (as those terms are used in FRBR) or in a more fine-grained way. The current • Crossref documentation

indicates that DOIs should be assigned to the 'work', however it is not clear that this usage of the word 'work' corresponds with its usage in FRBR - in fact, it is rather more likely that it corresponds with the use of the term Expression in FRBR.

There is also other evidence that publishers typically assign DOIs at the level of the FRBR Expression. For example, the • DOI Handbook discussion about 'granularity' concludes that in practice it is safer to assign separate DOIs to each language translation of a given article, i.e. to assign DOIs at the level of the Expression.

As a result, it is suggested that the following guidelines are followed when making use of DOIs in the context of this application profile:

- If the DOI has been assigned to all possible expressions and manifestations of the eprint (e.g. it is intended to resolve to both the HTML format of the preprint and the PDF format of the formally published article), use the DOI as the *resource URI* for the ScholarlyWork entity (and also encode it as the *value string* of a dc:identifier *statement* for that entity).
- If the DOI has been assigned to all manifestations of a particular expression of the eprint (e.g. it is intended to resolve to all the formats of the Spanish language version of the formally published article), use the DOI as the *resource URI* for the Expression entity.
- If the DOI has been assigned to a particular manifestation of an expression of the eprint (e.g. it is intended to resolve only to the PDF format of the French-language translation of the formally published article), use the DOI as the *resource URI* for the Manifestation entity.
- If the DOI has been assigned to a particular copy of a manifestation of an expression of the eprint (e.g. it is only intended to resolve to the particular copy of an article as served by a particular Web server), use the DOI as the *resource URI* for the Copy entity.

In all cases, the ' ◆ http://dx.doi.org/10.100/12345' form of URI encoding should be used.

Note that publisher-assigned DOIs are highly likely to fall into cases 1 or 2.

A note about mapping the Eprints Application Profile to Simple DC

http://www.ukoln.ac.uk/repositories/digirep/index/Mapping_the_Eprints_Application_Profile_to_Simple Eprints Application Profile to Simple DC] is available as a separate document.

The mapping enables software to 'dumb-down' (i.e. transform) a *description set* that conforms with this application profile to a *description set* that conforms with simple DC. In this context, 'simple DC' means a *description set* that comprises a single *description* that only uses the 15 *properties* in the Dublin Core Metadata Element Set.

It is worth noting that by using this mapping, a *description set* that complies with this application profile will be dumbed-down to form a *description* that complies with the •Using simple DC to describe eprints document produced by the •ePrints UK project.

It is also worth noting that the resulting simple DC *description* is about the eprint as a ScholarlyWork. While this is not the only approach to mapping this application profile to simple DC (for example, it would also be possible to map this application profile to a set of simple DC *descriptions*

about each of the Copy entities) it fits well with the intended usage of this application profile in the • OAI Protocol for Metadata Harvesting. In this case, each • OAI item will have associated records that correspond to both the oai_dc format and an XML format based on this application profile.

The particular mapping discussed here and in the separate document does not preclude alternative mappings being generated in the future.
